Malang, East Java, Indonesia

Profile

I am a Fresh Graduate from Mechanical Engineering, with a current 3.83 GPA and motivated to build a career in operations, process engineering, and continuous improvement. Gained hands on experience in operations, maintenance, and asset management during an internship at PT Perusahaan Gas Negara, where I supported equipment monitoring and operational improvement initiatives. Comfortable working in cross functional teams while handling analytical tasks in fast paced environments.

Education

UNIVERSITAS BRAWIJAYA	2022 – 2026
<i>Fresh Graduate Student Majoring in Mechanical Engineering</i>	
• GPA	: 3.83/4.00
• Thesis	: The Effect of Variations in Support-Wire Thermal Conductivity on Droplet Combustion Characteristics Using Fatty Acid Methyl Ester (FAME) Fuel
• Achievements	: Participated in International Student Competition on Engineering & Entrepreneurship (ISCENT)

Work Experiences

COMBUSTION ENGINE LABORATORY FT-UB	Jun 2024 – Jul 2026
<i>Assistant Coordinator & Laboratory Assistant</i>	
• Selected as a Research Assistant for a collaborative project with Astra Honda Motor (AHM), performed fuel property testing for 7 gasoline & ethanol fuel blend variations. Achieving 100% successful test execution and ensuring accurate experimental data for engineering analysis.	
• Performed 10 fuel property tests, including Diesel Engine, Bomb Calorimeter, FTIR, Flash Point, and Density, for 100+ external samples with a 100% successful testing completion rate.	
• Supervised 10 laboratory assistants in delivering practical sessions for 90+ students while serving as the primary liaison between laboratory assistants and lecturers, coordinating laboratory operations and external partnerships.	
PT. PERUSAHAAN GAS NEGARA TBK	Jan – Feb 2025
<i>Operation & Maintenance Management Intern</i>	
• Analyzed torque, power output, fuel consumption, and thermal efficiency of diesel and gas generator sets under varying load, identifying under loaded operation (<40% capacity) as a key driver of reduced efficiency and recommending optimal 70–85% loading to prevent wet stacking and improve fuel economy. Proposed installing flowmeters at each station to enable more accurate ongoing performance evaluation.	
• Assessed the impact of maintenance practices on generator performance, identifying opportunities to improve effective power output, reduce specific fuel consumption, and enhance efficiency through predictive maintenance and condition based monitoring.	
• Developed practical knowledge of oil and gas operations through exposure to Piping and Instrumentation Diagrams (P&ID), gas compression systems, rotating equipment, maintenance workflows, and plant operational processes.	

Organization and Volunter Experience

HIMPUNAN MAHASISWA MESIN FT-UB 2024/2025	Maret 2024 – Maret 2025
<i>Staff of Scientific Departement</i>	
• Worked on spreading information regarding of MRC (Mechanical Research Club). I also facilitated mechanical engineering students to design training, writing training, presentation training, and technical training for competitions.	
• Organized academic and scientific events, coordinating committees and stakeholders to ensure successful program delivery.	
KREATIVITAS MESIN BRAWIJAYA 2024	2024
<i>Staff of Liaison Officer Divison</i>	
M – GAMES 2024	2024
<i>Organizing Committee</i>	
PROBINMABA 2024	2024
<i>Steering Committee</i>	
SIDANG UMUM MAHASISWA MESIN 2023	2023
<i>Main Treasurer</i>	

Certificates and Skills

Microsoft Office Desktop Application – Trust Training Partners	2026
Intro to Data Analytics – RevoU Mini Course	2025
Intro to Software Engineer – RevoU Mini Course	2025
Hardskill	: Microsoft Excel, Microsoft Word, Microsoft Power Point, Autodesk Inventor, and Visual Studio Code
Softskill	: Leadership, Project Management, Stakeholder Management, and Teamwork
Language	: English and Indonesia
